DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Li (US 6,275,531), in view of Iizuka and further in view of Mishima et al (US 5,825,419).

Re claims 1-21: As indicated in the previous office action, the combination of Li and Iizuka discloses all the limitations as amended claims 1-21 except the limitation of accessing the rearranged data set in memory in a continuous manner even though the combination does show the converting the rearranged data set into a coded data set. Mishima et al teaches the data can be decoded by the maximum value and the minimum value (or data corresponding thereto) and the quantization results of necessary pixels. In the mean time, according to the way of calculation whereby the difference in respect of the prediction value derived from the contiguous pixel is calculated, it is necessary for decoding one pixel to decode all of the data which have been scanned prior to the one pixel and when the operation is used in the motion compensating prediction necessitating the reading of an arbitrary position, the control of the memory is complicated. However, in such a case, the quantization results for the respective pixels depend only on the maximum value and the minimum value (or data corresponding thereto) and accordingly,

the reading control of the memory is simplified and the access frequency is reduced. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the combination of Li and Iizuka by accessing the rearranged data set in the memory in a contiguous manner. Doing so would help to simplify the reading control of the memory and reduce the access frequency.

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
